

Website accessibility scan report

Corner Shop (sample page) · 2026-09-21 · WCAG 2.1 AA (the standard the European Accessibility Act points to via EN 301 549) · automated scan with axe-core 4.13.0

Read this first. This is an automated scan. Automated tools detect only part of the WCAG requirements (many need a human to check), so a clean scan does not prove compliance and this report is not legal advice or a compliance certificate. What it does give you is a prioritised, evidence-based list of the problems a machine can prove, fastest fixes first.

Pages scanned

Page	Rules failed	Elements affected	Note
Sample page (broken.html)	7	8	

Fix these first

Priority	Problem	Severity	Elements	WCAG
1	Images must have alternative text	critical	2	1.1.1 Non-text Content
2	Buttons must have discernible text	critical	1	4.1.2 Name, Role, Value
3	Elements must meet minimum color contrast ratio thresholds	serious	1	1.4.3 Contrast (Minimum)
4	Documents must have <title> element to aid in navigation	serious	1	2.4.2 Page Titled
5	<html> element must have a lang attribute	serious	1	3.1.1 Language of Page

6	Links must have discernible text	serious	1	2.4.4 Link Purpose (In Context), 4.1.2 Name, Role, Value
7	Zooming and scaling must not be disabled	moderate	1	1.4.4 Resize Text

Detailed findings

Images must have alternative text

critical 2 elements 1 page WCAG 1.1.1 Non-text Content

Why it matters. Images without a text alternative are invisible to screen-reader users, and they are the single most common failure.

How to fix. Give every meaningful image a short, descriptive alt text. Decorative images should have alt="" so they are skipped.

Examples found

```
img[src$="lamp-blue.jpg"]

```

Suggested fix (verified: applied to your page in a test browser and re-scanned, the failure disappeared):

Meaningful image: `` (replace the alt text with a real description)

Decorative image: `add alt=""`

```
img[src$="logo.png"]

```

Suggested fix (verified: applied to your page in a test browser and re-scanned, the failure disappeared):

Meaningful image: `` (replace the alt text with a real description)

Decorative image: `add alt=""`

Reference: <https://dequeuniversity.com/rules/axe/4.13/image-alt?application=axeAPI>

Buttons must have discernible text

critical

1 element

1 page

WCAG 4.1.2 Name, Role, Value

Why it matters. A button with no name is announced as just "button".

How to fix. Add visible text, or aria-label describing the action ("Search", "Subscribe"), and hide decorative icons with aria-hidden="true".

Examples found

```
button
<button><svg width="16" height="16"></svg></button>
```

Suggested fix (verified: applied to your page in a test browser and re-scanned, the failure disappeared):

Add an accessible name, for example: aria-label="DESCRIBE THE ACTION" (replace the placeholder text) and aria-hidden="true" on any decorative icon inside

Reference: <https://dequeuniversity.com/rules/axe/4.13/button-name?application=axeAPI>

Elements must meet minimum color contrast ratio thresholds

serious

1 element

1 page

WCAG 1.4.3 Contrast (Minimum)

Why it matters. Text that is too pale is hard or impossible to read for many people, including anyone in bright light.

How to fix. Make text at least 4.5:1 against its background (3:1 for large text). Darken the text or change the background.

Examples found

```
p
<p style="color:#aaaaaa">Free delivery on orders over 50 euro (this text is too pale
to read comfortably).</p>
```

Suggested fix (verified: applied to your page in a test browser and re-scanned, the failure disappeared):

color: #757575; /* 4.61:1 on #ffffff; was #aaaaaa at 2.32:1 */

Reference: <https://dequeuniversity.com/rules/axe/4.13/color-contrast?application=axeAPI>

Documents must have <title> element to aid in navigation

serious

1 element

1 page

WCAG 2.4.2 Page Titled

Why it matters. A page with no title cannot be identified in browser tabs, history or by screen readers.

How to fix. Add a unique, descriptive <title> to every page.

Examples found

```
html
<html>
```

Suggested fix (verified: applied to your page in a test browser and re-scanned, the failure disappeared):

```
<title>Page topic - Your shop name</title>    /* unique on every page */
```

Reference: <https://dequeuniversity.com/rules/axe/4.13/document-title?application=axeAPI>

<html> element must have a lang attribute

serious

1 element

1 page

WCAG 3.1.1 Language of Page

Why it matters. Without a page language, screen readers may read the page with the wrong pronunciation.

How to fix. Set the language on the root element, for example <html lang="de">.

Examples found

```
html
<html>
```

Suggested fix (verified: applied to your page in a test browser and re-scanned, the failure disappeared):

```
<html lang="en">    /* confirm this is the page language */
```

Reference: <https://dequeuniversity.com/rules/axe/4.13/html-has-lang?application=axeAPI>

Links must have discernible text

serious

1 element

1 page

WCAG 2.4.4 Link Purpose (In Context)

WCAG 4.1.2 Name, Role, Value

Why it matters. A link with no readable name is announced as just "link", so users cannot tell where it goes.

How to fix. Give every link visible text, or an aria-label / alt text on its icon that says where it goes ("Shopping cart").

Examples found

```
a
<a href="/cart"><i class="icon-cart"></i></a>
```

Suggested fix (verified: applied to your page in a test browser and re-scanned, the failure disappeared):

Add an accessible name, for example: `aria-label="Cart"` and `aria-hidden="true"` on any decorative icon inside

Reference: <https://dequeuniversity.com/rules/axe/4.13/link-name?application=axeAPI>

Zooming and scaling must not be disabled

moderate

1 element

1 page

WCAG 1.4.4 Resize Text

Why it matters. Blocking pinch-zoom stops low-vision users from enlarging the page.

How to fix. Remove `user-scalable=no` and any maximum-scale below 5 from the viewport meta tag.

Examples found

```
meta
<meta name="viewport" content="width=device-width, initial-scale=1, user-
scalable=no">
```

Suggested fix (verified: applied to your page in a test browser and re-scanned, the failure disappeared):

```
<meta name="viewport" content="width=device-width, initial-scale=1">
```

Reference: <https://dequeuniversity.com/rules/axe/4.13/meta-viewport?application=axeAPI>

What automated scanning cannot check (do these by hand)

- Everything works with the keyboard alone, with a visible focus indicator and no traps.
- Reading order and focus order make sense with a screen reader (NVDA, VoiceOver).
- Text alternatives are actually meaningful, not just present.
- Videos have captions; audio has transcripts.
- Error messages and form instructions are clear and connected to their fields.
- Content reflows at 320px width and at 200% zoom without losing information.
- Under the EAA you generally also need to publish an accessibility statement describing your compliance level and how to contact you.

Method

Pages loaded in headless Chromium (153.0.8010.12) at 1280px width; axe-core 4.13.0 run with the wcag2a, wcag2aa, wcag21a and wcag21aa rule sets; findings de-duplicated per rule. Scanned 2026-09-21T10:56:53.374Z.
